### WDT Announces European Supply Agreement

Wellington Drive Technologies Ltd (NZSE:WDT) today announced a Supply Agreement with the European market leader for whole building ventilation and heat recovery systems.

The agreement covers supply by WDT of DE066 and DD070 motors, and associated controllers, from February 2004. Projected quantities envisaged by the agreement begin at thirty thousand units, with a value of €1.1M in 2004 at the indicative pricing levels agreed, rising to sixty thousand units in 2005. Order levels are subject to confirmation.

“This new customer is the market leader for heat recovery ventilation products, which are now mandatory for new buildings in several European countries under European energy efficiency regulations”, said WDT Chief Executive Ross Green. “The present agreement covers a portion only of their present production. The low noise of our DE066 and DD070 motors, as well as the low power consumption, was an important factor in the decision to use Wellington.”

Green said that this was an important addition to WDT’s European customer base. “To support these customers, April saw us open a small sales and logistics office in the United Kingdom.”

WDT promotes a new format of energy-efficient electric motor, targeted at premium segments of the appliance market. For further information visit [www.wdtl.com](http://www.wdtl.com).
