Re: Order Received and Manufacturing/Sales Agreement Reached

Ugur Refrigeration (Turkey) has placed an additional order for 32,000 AirMoVent commercial refrigeration motors, covering their requirements for March 2006. It is expected that orders for AirMoVent motors from Ugur will continue to be received regularly and that they will also begin to purchase Wellington's high efficiency ECR motors in due course.

Agreement has also been reached with Changzou Match-Well Electrical Products Company ("Match-Well") of China. Under the agreement, Match-Well obtains rights to manufacture and sell Wellington's new ECR81 motor to customers for commercial refrigeration and other products in the Peoples' Republic of China, and supplies motors to Wellington. Electronics and software for all ECR81 motors, including those sold in China, are supplied to Match-Well by Wellington.

Match-Well (www.match-well.com) is an established manufacturer of conventional AC motors and other products. They have identified strong demand in China for motors with high efficiency, due to the current shortages of electricity there.
