Media Release

For Immediate Release

Orders Received

An order for the production engineering stages of a major Total Integration programme has been received from our customer, a major United States company. The project work involves the design, development, manufacturing and supply of motors, electronics and software for a common appliance that is used in many households, offices and light commercial premises in the United States and worldwide.

Wellington motors in these products reduce their electricity consumption to less than one third of current levels, while providing additional features that aid assembly, improve industrial design and assist with manufacturing cost reduction. The programme is being driven in part by pending federal regulations in the United States, which are expected to mandate reduced electricity consumption for products of this type.

Work has been on going since shortly after our initial announcement in February 2006 and has progressed successfully through several development stages since then. Agreement was also reached this month on the major arrangements for production of the new product.

As noted when the initial announcement of this programme was made, for reasons of commercial confidentiality, neither the customer name, nor the specific product area can be disclosed. However, the customer currently sells several million units per year, comprising less than one third of the multi million unit market for these appliances in the United States. Although the new Wellington motor system will be released in the premium segment of the market first of all, the design is intended to be suitable over time for all versions in the customer's overall product line.

In addition to this success, new orders for Wellington "ECR" electricity saving commercial refrigeration motors have also recently been received from Federal Industries Inc. (United States), a major manufacturer of food display and merchandising equipment. We have also commenced delivery of commercial refrigeration motors to Mexico, marking the first sales in that important market. Order flow from established customers for Wellington's commercial refrigeration motors in Europe, Turkey and the United States has remained steady.
