

Connected everything – multifunctional integrated sensor for IoT

Introducing the Connect Monitor - multifunctional refrigeration sensor and data logger.

Mounted inside, close to the door/lid of any refrigerated or frozen appliance*, the Connect Monitor is a battery-operated device which senses and records operational data such as:

-  Internal temperature
-  Compressor run time
-  Door swings
-  Asset location

Connect Monitor logs and stores up to two months of data which it sends to the ConnectTM SCS Cloud via our Bluetooth-based data collection methods. Its Bluetooth capabilities include proximity marketing beacons. Combine Monitor with our ConnectTM Network for always on, real-time logging and monitoring, critical for freezers and high value locations.

Connect Monitor can be easily installed in any new or existing refrigerated or freezer appliance. It can be connected to the ConnectTM Cloud through one of our Connect IoT apps. Each Connect Monitor is NFC enabled, simply touching a Connect IoT app enabled smartphone will enable the Connect Monitor configuration.

Retrofit/
new build

Easy to install

Self-
contained

Universal
fit

5 year
battery life

Use cases

- Retrofit your non-connected cooler fleet to improve operational efficiency.
- Track location and ensure product quality by monitoring cold or frozen goods in transit.
- Verify product safety by using in cold rooms, and walk-in freezers and fridges.
- Ensure proper temperatures anywhere by adding to portable refrigeration units.
- Monitor product quality by adding to food service cooled cabinets and equipment.
- Lower costs, save time, and eliminate human errors by automating your HACCP monitoring and reporting.
- Ensure proper performance by including in temporary cold storage devices at events.
- Seamless, automated asset tracking of any cooled or ambient equipment.

*One Connect Monitor required per door. Multiple Connect Monitors per system may also be required for special applications.

Safety warning: Connect Monitor devices contain a lithium battery. This may be hazardous if incinerated or physically damaged. Used Connect Monitor devices should be responsibly disposed.

Patent pending.
